MLP & Energy Infrastructure Market

Fourth Quarter 2018 Commentary

OVERVIEW

Master Limited Partnerships ("MLPs"), as represented by the Alerian MLP Index ("Index") returned -17.30% during the quarter ended December 31, 2018. The Index's one year return was -12.42%. These returns compare to returns for the S&P 500 of -13.52% and -4.38% for the quarter and year, respectively.

OUTLOOK

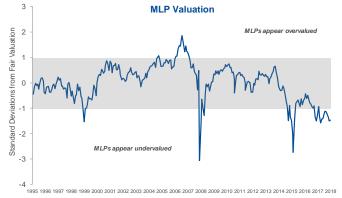

MLP fundamentals remained strong throughout 2018. At year end, MLPs were generating an all-time high level of cash flow. As illustrated in the chart to the right we believe the difficult returns for the quarter can generally be characterized as the result of a broader de-risking in the equity markets. Whether attributable to fears of an economic slow-down outside of the United States, global trade concerns, diminishing returns from the tax cut, an overly aggressive Fed, or political impasse, the potential culprits are many. Layer on top of this an active tax-loss selling season from MLP investors and you end up with the 3rd down year for the Index out of the past 4 years. We view as a modest positive the fact that MLPs traded more in line with the S&P 500 and, though directionally similar, not in lockstep with crude oil prices.

MLPs began to get their footing in late December as the inevitable end of tax-loss selling approached. As a result of the weak quarter, MLPs enter the New Year at very

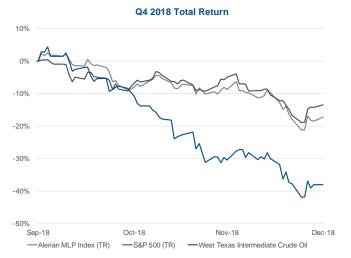

attractive valuations (see MLP Valuation chart below) that reflect investor sentiment more so than strong energy industry fundamentals.

The two charts on the next page put a finer point on the valuation topic. Assessing the measure of enterprise value to EBITDA (earnings before interest, taxes and depreciation), MLPs are cheaper today than they were when crude oil prices bottomed at \$26 in February 2016. Trading at 9.0x as of 12/31/2018, MLPs look cheaper than utilities or the broader market on this metric as well. Further evidence of low valuations is that private equity investors have been offering premiums to buy publicly-traded MLPs. On December 19th, Tallgrass Energy¹ outperformed the Index by over 12% on news that private equity investors were rumored to be considering acquiring the MLP.

¹As of 12/31/2018, Tallgrass Energy LP represented 6.50% of the portfolio of the Fiduciary/Claymore Energy Infrastructure Fund (FMO).

From this backdrop, we think MLPs and energy infrastructure are poised to perform well in comparison to most equity and fixed income asset classes. We believe that MLP distribution cuts are mostly behind us, which is a catalyst to bring yield investors back to the group. The chart to the right illustrates an inflection in distributions in 2019, which we believe will position MLPs and energy infrastructure equities to outperform fixed income securities in an environment where investors fear an increase in the target rate by the Federal Reserve Open Market Committee. If we are correct in this outlook, a stabilization of equity prices could confirm a near-term bottom in MLPs. This could trigger a realization by value investors that the group is undervalued given the persistent recovery in energy fundamentals.

Potential actions are assumed to take place before Q219 distributions and include ANDX, CQP, TCP, and SMLP.

An issue that hampered security performance for the group in 2018 was noise and uncertainty created by the large number of consolidation transactions between MLPs and their affiliates. It is readily apparent from the following column chart that entities who entered 2018 with clean stories, i.e. no publicly traded general partners with Incentive Distribution Rights ("IDRs"), were preferred by investors. Those entities that announced a transaction during the period meaningfully underperformed.

While it may appear as though the cure was worse than the disease, we think the asset class is healthier for it. As noted in the table on the next page, MLPs currently offer attractive yields with lower payout ratios than before the energy collapse. Leverage has returned to reasonable levels compared to the peak levels of 2015 and 2016. Distribution/dividend growth rates have come down to levels we began calling for in 2014. In addition, many midstream entities are shifting from accessing the equity markets to internally generating cash flow to fund capital expenditures. All of these factors present less risky, more reliable, yield-oriented investments that we think investors will see as opportunities in 2019.

| Distribution Yield % | 5.2 | 8.8 |
| Distribution Growth Rate % | 8.5 | 5.0 |
| Commodity Price Exposure % | 19.9 | 7.9 |
| Distribution Coverage Ratio | 1.17x | 1.47x |

We acknowledge that the interest rate environment and lower crude oil prices are a risk to our 2019 outlook. A global slow down remains a medium-term risk, and this may induce a recession in the United States. Notwithstanding these risks, the fundamentals for the energy industry look much healthier than current valuations suggest. In large part, increased production of oil and natural gas is increasingly finding a growing export market and investment is being made to meet this demand. This should bode well for midstream volumes and sustained higher earnings for the companies we own. Overall, we believe midstream companies present a compelling investment today and could outperform other areas of the market on a relative basis in 2019.

Thank you for your continued trust and support. As always, we welcome any questions you may have.

Sincerely,

Advisory Research MLP & Energy Infrastructure Team

Investing involves risk, including the possible loss of principal. Past performance is not indicative of future results. An investment in MLP units involves risks that differ from a similar investment in equity securities, such as common stock, of a corporation. Holders of MLP units have the rights typically afforded to limited partners in a limited partnership. As compared to common shareholders of a corporation, holders of MLP units have more limited control and limited rights to vote on matters affecting the partnership. There are certain tax risks associated with an investment in MLP units. Additionally, conflicts of interest may exist between common unit holders, subordinated unit holders and the general partner of an MLP; for example a conflict may arise as a result of incentive distribution payments.
