Key Investor Information

This document provides you with key investor information about this fund. It is not marketing material. The information is required by law to help you understand the nature and the risks of investing in this fund. You are advised to read it so you can make an informed decision about whether to invest.

GFI Fund (the "Fund") Class I USD Distributing (ISIN: IE00BG88GF45)

The Fund is a sub-fund of Guggenheim Global Investments plc (the "Company") managed by Guggenheim Partners Fund Management (Europe) Limited (the "Manager").

Objectives and Investment Policy

The Fund's investment objective is to provide capital growth and interest income over time by investing globally in debt securities. Debt securities are securities issued by governments/governmental bodies, corporations and special purpose entities which generally pay interest at an agreed rate over a defined period of time. The Fund is actively managed, meaning the investment manager will actively select, purchase and sell securities with the aim of meeting the investment objectives of the Fund. The Fund's performance is measured relative to the Barclays US Aggregate Bond Index (the "Index") **for comparison purposes only**. The Index represents securities that are SEC-registered, taxable, and dollar denominated. The index covers the U.S. investment grade fixed rate bond market, with index components for government and corporate securities, mortgage pass-through securities, and asset-backed securities. The Index does not define asset allocation of the Fund and depending on market conditions the Fund may deviate significantly from the Index.

The primary geographical focus of the Fund's investment is the U.S., Canada and Europe. The Fund may invest outside of the U.S., Canada and Europe (including emerging markets) if it considers this appropriate.

The Fund may engage in transactions in financial derivative instruments including to hedge its investments, gain market exposure and manage the effects of interest rate movements on the Fund's performance and volatility. Such financial derivative instruments include futures, forwards, swaps (including but not limited to total return swaps), swaptions, options, repurchase agreements and reverse repurchase agreements.

A swaption is an option on a swap. It gives the Fund the right to enter into an interest rate swap at a specified date in the future. Swaptions are contracts whereby one party receives a fee in return for agreeing to enter into a forward swap at a predetermined fixed rate if some contingency event occurs.

A reverse repurchase agreement is a transaction whereby a Fund purchases securities from a counterparty and simultaneously commits to resell the securities to the counterparty at an agreed upon date and price.

A future is a contract, traded on an exchange, to buy or sell an asset at a specified price and on a specific future date.

Forwards are similar to futures, but are traded with a specific counterparty as opposed to on an exchange.

Swaps are agreements between two parties to exchange future payments in one financial asset for payments in another. Swaps must include an exchange of a principal amount at the maturity of or at the inception of the contract.

An option is a contract that gives the buyer the right, but not the obligation, to buy or sell an underlying asset at a specific price on or before a certain date.

If you hold units in the distributing share class then the Fund aims to distribute available income every quarter.

You can sell your shares on any working day that banks are open for business in Ireland and the United States. You must submit your application to the Fund's Administrator before 11.00 a.m. (Irish time) on the business day on which you want to sell.

Risk and Reward Profile

The indicator above illustrates the position of this fund on a standard Risk/Reward category scale. The category is chosen based on the volatility of returns.

Historical data is used in calculating the synthetic risk and reward indicator, and may not be a reliable indication of the future risk profile of the Fund.

A **category 1** fund is not a risk-free investment - the risk of losing your money is small, but the chance of making gains is also limited. With a **category 7** fund, the risk of losing your money is high, but there is also a chance of making higher gains. The seven-category scale is complex. For example, a category 2 fund is not twice as risky as a category 1 fund.

The Fund is in category 3 (denoting medium risk, but with moderate potential for higher rewards) because it invests primarily in debt securities - the value of which tends to be more stable than other types of investment.

- Investments of the Fund may in some cases have below investment grade credit ratings, which means that while the interest paid by these may be higher, there is potentially a higher risk of default and loss to the Fund.
- There is a risk that the issuers of bonds and other debt securities may not be able to pay interest or repay their debt leading to losses being incurred by the Fund. This risk is potentially greater than average where the Fund invests in an investment with a lower credit rating.
- The Fund invests in some overseas markets which carry a higher than average investment risk and the Fund may have problems or delays in getting its investments back when required.
- Liquidity risk – it may become difficult to sell the Fund's assets at a certain time and for a reasonable price.
- Currency risk – the Fund may invest in securities that are issued in currencies other than the base currency of the fund.
- Market risk – certain stocks, bonds and investments may decline in value more than the overall stock market.

For more information on risks, please see the section entitled 'Risk Factors' in the prospectus.
