

Core Four 60/40 Retirement Portfolio, Series 15

Investment Objective

The Core Four 60/40 Retirement Portfolio, Series 15 (Trust) seeks current income as the primary objective, with the potential for capital appreciation as a secondary objective.

Key Considerations

- **A 60/40 Blend:** To address the need for income while also managing risk and volatility, 60% of the Trust is composed of dividend-paying and large-cap growth equities, and 40% is comprised of higher-yielding fixed income securities and investment grade bond ETFs.
- **Multi-Strategy Approach:** Provides exposure to four investment strategies that collectively seek to provide both attractive income and growth of principal.
- **Convenient Retirement Investing:** A convenient, easy-to-implement addition to a retirement portfolio that may help address the needs or concerns of individuals near or in retirement.

Portfolio Allocation

Breakdowns and weightings are as of 5.19.2021 and subject to change.

FIXED-INCOME SECTOR WEIGHTINGS

Corporate Investment Grade	13.00%
Mortgage-Backed Securities	6.01%
Commercial Mortgage-Backed Securities	6.00%
Municipal Build America Bonds	5.00%
Floating Rate / Senior Loan	3.00%
Municipal High Yield	3.00%
Corporate High Yield	2.00%
International	2.00%
Fixed-Income ETF Total	40.01%

CAPITALIZATION BREAKDOWN¹

¹The above breakdown excludes fixed-income ETFs and represents 59.99% of the overall portfolio.

Combining Income and Growth for an Attractive Retirement Portfolio

Building a sustainable retirement portfolio is more challenging than ever. The combination of increasing health care costs and longer life expectancies have many investors concerned about outliving their money. Given the current low interest rate environment, an overly conservative fixed income portfolio may not be the answer. Guggenheim created the Core Four 60/40 Retirement Portfolio with these issues in mind. The strategy seeks to balance principal stability with three additional strategies, designed to help your retirement portfolio keep up with inflation and longer life expectancy.

The Core Four 60/40 Retirement Portfolio may represent an attractive supplement to a retirement strategy by investing in an approximately 60/40 blend of higher yielding and dividend grower stocks combined with fixed-income ETFs. The portfolio is professionally selected by Guggenheim to seek higher-yielding income, dividend growth, principal stability, and capital appreciation potential in a single easy-to-implement investment.

Core Four 60/40 Retirement Portfolio, Series 15

Higher-Yielding Income

To provide income for daily needs

Approximately 30 percent of the Trust portfolio is focused on securities that seek to deliver an above average income stream, including higher dividend-yielding, U.S.-listed equity securities and higher-yielding fixed-income asset classes accessed through ETFs.

CUSIP (fee-reinvest)	40176Y497
Ticker	CCFOOX

²The Historical Annual Dividend Distribution (HADD) is as of the day prior to trust deposit and subject to change. There is no guarantee the issuers of the securities included in the Trust will declare dividends or distributions in the future. **Due to the negative economic impact across many industries caused by the recent COVID-19 outbreak, certain issuers of the securities included in the Trust may elect to reduce the amount of, or cancel entirely, dividends and/or distributions paid in the future. As a result, the HADD figure will likely be higher, and in some cases significantly higher, than the actual distribution rate achieved by the Trust.** The HADD of the securities included in the Trust is for illustrative purposes only and is not indicative of the Trust's distribution rate. The HADD is the weighted average of the trailing twelve-month distributions paid by the securities included in the portfolio and is reduced to account for the effects of fees and expenses, which will be incurred when investing in the Trust. The HADD will vary due to certain factors that may include, but are not limited to, a change in the dividends paid by issuers, a change in Trust expenses or the sale or maturity of securities in the portfolio. ³The deferred sales charge (DSC) is a fixed amount and will be deducted in monthly installments on the last business day commencing September 2021 and ending November 2021 or upon early redemption. For unit prices other than \$10, percentages of C&D fees, and DSCs will vary but in no event will the maximum sales charge (S/C) exceed the total S/C. Early redemption of units will still cause payment of the DSC. However, an initial sales charge, which is equal to the difference between the maximum S/C and the sum of any remaining deferred S/C charges and C&D, will be charged if the price paid for units exceeds \$10 per unit. ⁴For unit prices other than \$10, percentage of the C&D fee will vary.

The Core Four 60/40 Retirement Portfolio, Series 15 is a Unit Investment Trust.

RISK CONSIDERATIONS: As with all investments, you may lose some or all of your investment in the Trust. No assurance can be given that the Trust's investment objective will be achieved.

• Securities prices can be volatile. The value of your investment may fall over time. Market value fluctuates in response to various factors. Changes in legal, political, regulatory, tax and economic conditions may cause fluctuations in markets and securities prices, which could negatively impact the value of the Trust. Events such as war, terrorism, natural and environmental disasters and the spread of infectious illnesses or other public health emergencies may adversely affect the economy, various markets and issuers. Recently, the outbreak of a novel and highly contagious form of coronavirus ("COVID-19") has adversely impacted global commercial activity and contributed to significant volatility in certain markets. Many governments and businesses have instituted quarantines and closures, which has resulted in significant disruption in manufacturing, supply chains, consumer demand and economic activity. The potential impacts are increasingly uncertain, difficult to assess and impossible to predict, and may result in significant losses. Any adverse event could materially and negatively impact the value and performance of trust and the Trust's ability to achieve its investment objectives. • Securities selected according to this strategy may not perform as intended. The investment decisions, including the selection methodologies used to determine the holdings of the four portfolio sleeves, may not produce the intended results and there is no guarantee that the investment objective will be achieved. • The Trust invests in shares of ETFs, which are subject to various risks, including management's ability to meet the fund's investment objective. Shares of ETFs may trade at a discount from their net asset value in the secondary market. This risk is separate and distinct from the risk that the net asset value of the ETF shares may decrease. You will bear not only your share of your Trust's expenses, but also the expenses of the underlying ETFs. By investing in ETFs, the Trust incurs greater expenses than you would incur if you invested directly in the ETFs. • The ETFs are subject to annual fees and expenses, including a management fee. Unitholders of the Trust will bear these fees in addition to the fees and expenses of the Trust. • The Trust is subject to an ETF's index correlation risk. • The value of the fixed-

income securities in the ETFs will generally fall if interest rates, in general, rise. The Trust may be subject to greater risk of rising interest rates than would normally be the case due to the current period of historically low rates. • An ETF or an issuer of securities held by an ETF may be unwilling or unable to make principal payments and/or to declare distributions in the future, may call a security before its stated maturity, or may reduce the level of distributions declared. • The financial condition of an ETF or an issuer of securities held by an ETF may worsen, resulting in a reduction in the value of your units. • Economic conditions may lead to limited liquidity and greater volatility. • Certain ETFs held by the Trust invest in securities that are rated below investment-grade and are considered to be "junk" securities, speculative and are subject to greater market and credit risks, and the risk of non-payment or default is higher than with investment-grade securities. Such securities may be more sensitive to interest rate changes and more likely to receive early returns of principal in falling rate environments. • Certain ETFs held by the Trust may invest in securities that are rated as investment-grade by only one rating agency. As a result, such split-rated securities may have more speculative characteristics and are subject to a greater risk of default than securities rated as investment-grade by more than one rating agency. • Certain ETFs held by the Trust invest in mortgage-backed securities, which represent direct or indirect participations in, or are secured by and payable from, mortgage loans secured by real property and can include single- and multi-class pass-through securities and collateralized mortgage obligations. Unscheduled or early payments of principal and interest on the underlying mortgages may make the securities' effective maturity shorter than anticipated. Rising interest rates tend to extend the duration of mortgage-backed securities, making them more sensitive to changes in interest rates, and may reduce the market value of the securities. Mortgage-backed securities are subject to prepayment risk, the risk that borrowers may pay off their mortgages sooner than expected, particularly when interest rates decline. This can reduce the ETFs', and therefore the trust's, returns because the ETFs may have to reinvest that money at lower prevailing interest rates. • The Trust invests in securities issued by small- and mid-cap companies and certain ETFs held by the Trust may invest in securities issued by small- and mid-cap companies, which may have limited product lines, markets or financial resources and may be more vulnerable to adverse general market or economic developments. These

securities customarily involve more investment risk than securities of large-capitalization companies. • Share prices or dividend rates on the securities in the Trust may decline during the life of the Trust and there is no guarantee that the issuers of the securities will declare dividends in the future and, if declared, whether they will remain at current levels or increase over time. • The Trust may be susceptible to potential risks through breaches in cybersecurity. • The Trust is subject to risks arising from various operational factors and their service providers. Although the Trust seeks to reduce operational risks through controls and procedures, there is no way to completely protect against such risks. • Inflation may lead to a decrease in the value of assets or income from investments. **Please see the Trust prospectus for more complete risk information.**

Unit Investment Trusts are fixed, not actively managed and should be considered as part of a long-term strategy. Investors should consider their ability to invest in successive portfolios, if available, at the applicable sales charge. UITs are subject to annual fund operating expenses in addition to the sales charge. Investors should consult an attorney or tax advisor regarding tax consequences associated with an investment from one series to the next, if available, and with the purchase or sale of units. Guggenheim Funds Distributors, LLC does not offer tax advice.

This material is not intended as a recommendation or as investment advice of any kind, including in connection with rollovers, transfers, and distributions. Such material is not provided in a fiduciary capacity, may not be relied upon for or in connection with the making of investment decisions, and does not constitute a solicitation of an offer to buy or sell securities.
