

Core Four 60/40 Allocation Portfolio, Series 25

Investment Objective

The Core Four 60/40 Allocation Portfolio, Series 25 (Trust) seeks current income as the primary objective, with the potential for capital appreciation as a secondary objective.

Key Considerations

- **A 60/40 Blend:** To address the need for income while also managing risk and volatility, 60% of the Trust comprises dividend-paying and large-cap growth equities, and 40% comprises higher-yielding fixed income securities and investment grade bond ETFs.
- **Multi-Strategy Approach:** Provides exposure to four investment strategies that collectively seek to provide both attractive income and growth of principal.
- **Attractive Core Portfolio Allocation:** With combined exposure to fixed-income securities across the credit spectrum as well as exposure to stocks focused on dividend income & dividend consistency across multiple capitalization levels and style categories, the Trust offers broader diversification than benchmark-based 60/40 strategies.

Portfolio Allocation

Breakdowns and weightings are as of 11.17.2023 and subject to change.

FIXED-INCOME SECTOR WEIGHTINGS

Corporate Investment Grade	11.01%
Corporate High Yield	10.00%
Mortgage-Backed Securities	6.02%
Inflation Protection	5.00%
Municipal Build America Bonds	3.00%
Government Treasuries	3.00%
Float Rate / Senior Loan	2.00%
Fixed-Income ETF Total	40.03%

CAPITALIZATION BREAKDOWN¹

¹The above breakdown excludes fixed-income ETFs and represents 59.97% of the overall portfolio.

Four Core Investment Needs in a Convenient 60/40 Portfolio

Allocating 60% to equities and 40% to fixed-income is a traditional way to position portfolios. Equities serve as a potential portfolio growth engine and fixed-income offers the opportunity for stability and income. These two asset classes have, historically, produced a negative correlation to each other and combining them is designed to reduce overall risk. Yet not all 60/40 portfolio allocations perform in the same manner. Guggenheim takes a selective approach with the **Core Four 60/40 Allocation Portfolio**. In contrast to a traditional benchmark-based approach, Core Four 60/40 Allocation Portfolio is thoughtfully constructed and professionally selected by Guggenheim and seeks to meet four core investment needs:

- Higher yielding income for daily needs,
- Income growth to keep pace with inflation,
- Capital appreciation for growth, and
- Principal stability to combat drawdowns.

The core four sleeves come together to create a unique 60/40 allocation that seeks to manage risk and volatility, yet deliver income and growth in a single easy to implement investment.

The Core Four 60/40 Allocation Portfolio, Series 25 is a Unit Investment Trust.

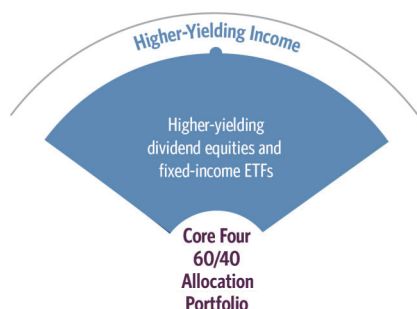

RISK CONSIDERATIONS: As with all investments, you may lose some or all of your investment in the Trust. No assurance can be given that the Trust's investment objective will be achieved. • Securities prices can be volatile. The value of your investment may fall over time. Market values of the Trust's securities fluctuate in response to various factors affecting an issuer. Additionally, events such as war, terrorism, natural and environmental disasters and the spread of infectious illnesses or other public health emergencies are impossible to predict and may adversely affect the economy, various markets and issuers, which may negatively impact the performance of the Trust and the Trust's ability to achieve its investment objectives. • Securities selected according to this strategy may not perform as intended. The investment decisions, including the selection methodologies used to determine the holdings of the four portfolio sleeves, may not produce the intended results and there is no guarantee that the investment objective will be achieved. • The Trust invests in "growth" stocks. Growth stocks are issued by companies which, based upon their higher than average price/book ratios, are expected to experience greater earnings growth rates relative to other companies in the same industry or the economy as a whole. Securities of growth companies may be more volatile than other stocks. If the perception of a company's growth potential is not realized, the securities purchased (CONTINUED ON LAST PAGE)

²The Historical Annual Dividend Distribution (HADD) is as of the day prior to trust deposit and subject to change. There is no guarantee the issuers of the securities included in the Trust will declare dividends or distributions in the future. The HADD of the securities included in the Trust is for illustrative purposes only and is not indicative of the Trust's distribution rate. The HADD is the weighted average of the trailing twelve-month distributions paid by the securities included in the portfolio and is reduced to account for the effects of fees and expenses, which will be incurred when investing in the Trust. The HADD will vary due to certain factors that may include, but are not limited to, a change in the dividends paid by issuers, a change in Trust expenses or the sale or maturity of securities in the portfolio. ³The deferred sales charge (DSC) is a fixed amount and will be deducted in monthly installments on the last business day commencing March 2024 and ending May 2024 or upon early redemption. For unit prices other than \$10, percentages of C&D fees, and DSCs will vary but in no event will the maximum sales charge (S/C) exceed the total S/C. Early redemption of units will still cause payment of the DSC. However, an initial sales charge, which is equal to the difference between the maximum S/C and the sum of any remaining deferred S/C charges and C&D, will be charged if the price paid for units exceeds \$10 per unit. ⁴For unit prices other than \$10, percentage of the C&D fee will vary.

RISK CONSIDERATIONS (CONTINUED) may not perform as expected, reducing the Trust's return. In addition, because different types of stocks tend to shift in and out of favor depending on market and economic conditions, "growth" stocks may perform differently from the market as a whole and other types of securities. • The Trust invests in shares of ETFs, which are subject to various risks, including management's ability to meet the fund's investment objective. Shares of ETFs may trade at a premium or discount from their net asset value in the secondary market. If the Trust has to sell an ETF share when the share is trading at a discount, the Trust will receive a price that is less than the ETF's net asset value. This risk is separate and distinct from the risk that the net asset value of the ETF shares may decrease. You will bear not only your share of your Trust's expenses, but also the expenses of the underlying ETFs. By investing in ETFs, the Trust incurs greater expenses than you would incur if you invested directly in the ETFs. • The ETFs are subject to annual fees and expenses, including a management fee. Unitholders of the Trust will bear these fees in addition to the fees and expenses of the Trust. • The Trust is subject to an ETF's index correlation risk. • The value of the fixed-income securities in the ETFs will generally fall if interest rates, in general, rise. The Trust may be subject to greater risk of rising interest rates than would normally be the case due to the current economic environment and the effect of potential government fiscal policy initiatives and resulting market reaction to those initiatives. • An ETF or an issuer of securities held by an ETF may be unwilling or unable to make principal payments and/or to declare distributions in the future, may call a security before its stated maturity, or may reduce the level of distributions declared. • The financial condition of an ETF or an issuer of securities held by an ETF may worsen, resulting in a reduction in the value of your units. • Economic conditions may lead to limited liquidity and greater

volatility. • Certain ETFs held by the Trust invest in securities that are rated below investment-grade and are considered to be "junk" securities. Below investment-grade obligations are considered to be primarily speculative with respect to the issuer's ability to make principal and interest payments and may be more volatile than higher rated securities of similar maturity. Additionally, they are subject to greater market, credit and liquidity risks than investment-grade securities. Accordingly, the risk of non-payment or default is higher than with investment-grade securities. In addition, such securities may be more sensitive to interest rate changes and more likely to receive early returns of principal in falling rate environments. • Certain ETFs held by the Trust may invest in securities that are rated as investment-grade by only one rating agency. As a result, such split-rated securities may have more speculative characteristics and are subject to a greater risk of default than securities rated as investment-grade by more than one rating agency. • The Trust invests in securities issued by mid-cap companies and certain ETFs held by the Trust may invest in securities issued by small- and mid-cap companies, which may have limited product lines, markets or financial resources and may be more vulnerable to adverse general market or economic developments. These securities customarily involve more investment risk than securities of large-capitalization companies. • Share prices or dividend rates on the securities in the Trust may decline during the life of the Trust and there is no guarantee that the issuers of the securities will declare dividends in the future and, if declared, whether they will remain at current levels or increase over time. • The Trust may be susceptible to potential risks through breaches in cybersecurity. • The Trust is subject to risks arising from various operational factors and their service providers. Although the Trust seeks to reduce operational risks through controls and procedures, there is no way to completely protect against such risks. • Inflation may lead to a decrease in the

value of assets or income from investments. **Please see the Trust prospectus for more complete risk information.**

Unit Investment Trusts are fixed, not actively managed and should be considered as part of a long-term strategy. Investors should consider their ability to invest in successive portfolios, if available, at the applicable sales charge. UITs are subject to annual fund operating expenses in addition to the sales charge. Investors should consult an attorney or tax advisor regarding tax consequences associated with an investment from one series to the next, if available, and with the purchase or sale of units. Guggenheim Funds Distributors, LLC does not offer tax advice.
