

Diversified Credit Portfolio of ETFs, Series 23

Investment Objective

The Diversified Credit Portfolio of ETFs, Series 23 (Trust) seeks to provide current income by investing in a diversified portfolio of exchange-traded funds (ETFs).

Key Considerations

- **Importance of Duration:** In selecting securities for the portfolio, Guggenheim seeks to adjust duration exposure along the yield curve based on our macro-economic forecasts, inflation outlook, and Fed policy views - seeking to optimize earned interest while protecting against potential rate moves that would impact current bond prices.
- **Diversification:** The portfolio consists of credit ETFs diversified across major fixed-income sectors that span various maturities and credit qualities.
- **Monthly Income:** Unlevered credit exposure that seeks to provide monthly income.

Portfolio Allocation

Breakdown and weightings are for the underlying securities held by the ETFs in the Trust, as of 8.11.2023 and subject to change.

FIXED-INCOME ASSET ALLOCATION WEIGHTINGS

Corporate Investment Grade	20.04%
Corporate High Yield	20.01%
Floating Rate / Senior Loan	12.49%
Mortgage-Backed Securities	10.00%
International	9.99%
Inflation Protection	7.47%
International Corporate	5.01%
Municipal - Build America Bonds	5.00%
Preferred	5.00%
Municipal - High Yield	2.51%
Agency / Government Guaranteed	2.48%
Total	100.00%

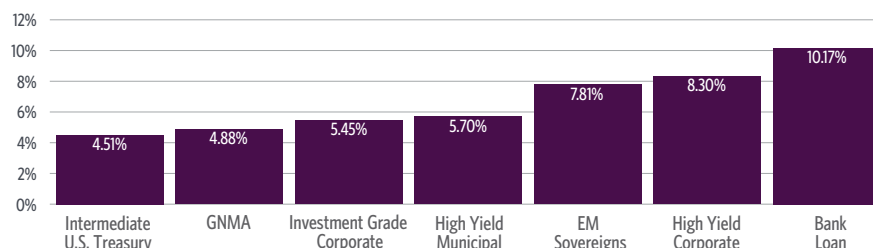

WEIGHTED AVERAGE EFFECTIVE DURATION 4.20¹

¹ Morningstar, 7.31.2023. Weighted average effective duration of the securities comprising the fund portfolio. Effective duration takes into account any embedded options (i.e., a put or a call) and reflects the expected change in future cash flows caused by the options in response to changing interest rates. Duration is a measurement of the change in the value of a bond in response to a change in interest rates, expressed in years.

Opportunities in Fixed-Income

Guggenheim believes that some of the best long-term return opportunities in the fixed-income markets can be found in credit sensitive securities, while moving assets away from U.S. Treasury securities. Unlike U.S. Treasury bonds, certain credit sensitive securities can potentially help investors increase their income while also reducing their exposure to interest rate increases.

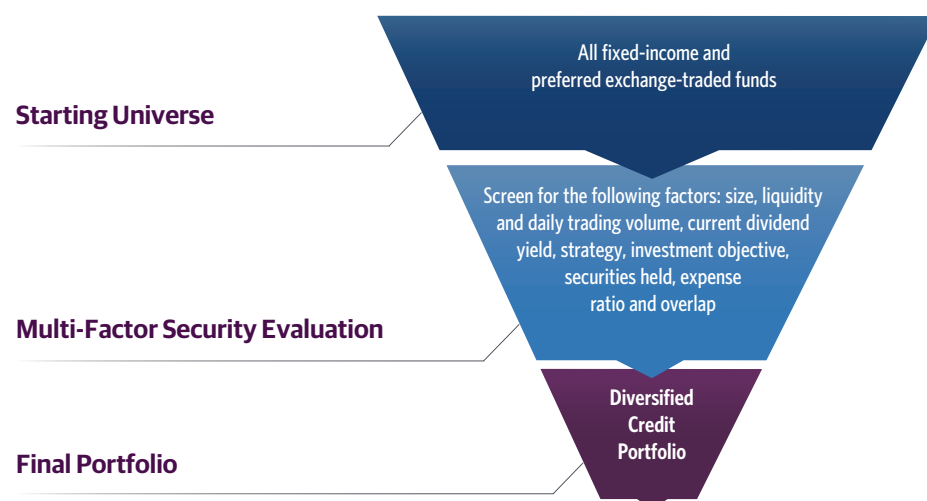

To provide exposure to these credit sensitive securities, Guggenheim created the Diversified Credit Portfolio of ETFs. The chart below highlights a few of the current opportunities Guggenheim sees in credit sensitive asset classes.

There is no guarantee that the trends and projections noted above will continue or come to fruition and they are subject to change. The chart above is for illustrative purposes only and does not represent any Guggenheim Investments product. Index Definitions can be found on next page. Reinvest	40177T612
Fee/Cash	40177T620
Fee/Reinvest	40177T638
Ticker	CDCPWX

²The Historical Annual Dividend Distribution (HADD) is as of the day prior to trust deposit and subject to change. There is no guarantee the issuers of the securities included in the Trust will declare dividends or distributions in the future. The HADD of the securities included in the Trust is for illustrative purposes only and is not indicative of the Trust's distribution rate. The HADD is the weighted average of the trailing twelve-month distributions paid by the securities included in the portfolio and is reduced to account for the effects of fees and expenses, which will be incurred when investing in the Trust. The HADD will vary due to certain factors that may include, but are not limited to, a change in the dividends paid by issuers, a change in Trust expenses or the sale or maturity of securities in the portfolio. ³The deferred sales charge (DSC) is a fixed amount and will be deducted in monthly installments on the last business day commencing March 2024 and ending May 2024 or upon early redemption. For unit prices other than \$10, percentages of C&D fees, and DSCs will vary but in no event will the maximum sales charge (S/C) exceed the total S/C. Early redemption of units will still cause payment of the DSC. However, an initial sales charge, which is equal to the difference between the maximum S/C and the sum of any remaining deferred S/C charges and C&D, will be charged if the price paid for units exceeds \$10 per unit. ⁴For unit prices other than \$10, percentage of the C&D fee will vary.

The Diversified Credit Portfolio of ETFs, Series 23 is a Unit Investment Trust.

INDEX DEFINITIONS: Investment Grade Corporate is represented by the **Bloomberg U.S. Corporate Bond Index:** The Index measures the investment-grade, fixed-rate, taxable corporate bond market. Intermediate U.S. Treasury is represented by the **Bloomberg Intermediate U.S. Treasury Index:** The Index comprises securities in the intermediate maturity range of the U.S. Treasury Index. The U.S. Treasury Index represents public obligations of the U.S. Treasury with a remaining maturity of one year or more. GNMA is represented by the **Bloomberg GNMA Index:** The Index covers the mortgage-backed pass-through securities of the Government National Mortgage Association (GNMA). EM Sovereigns are represented by the **Bloomberg EM Sovereign Index:** The Index includes USD-denominated sovereign debt from emerging markets in the following regions: Americas, Europe, Middle East, Africa, and Asia. High Yield Municipal is represented by the **Bloomberg Municipal Bond High Yield Index:** The Index is a rules-based, market-value-weighted index engineered for the non-investment grade tax-exempt bond market. Bank Loan is represented by the **Credit Suisse Leveraged Loan Index:** The Index tracks the investable market of the USD-denominated leveraged loan market. Loans must be rated "5B" or lower and only fully-funded term loans with a tenor of at least one year are included. Issuers must be domiciled in developed countries. High Yield Corporate is represented by the **Bloomberg U.S. Corporate High Yield Index:** The Index covers the universe of fixed rate, non-investment grade debt.

RISK CONSIDERATIONS: As with all investments, you may lose some or all of your investment in the Trust. No assurance can be given that the Trust's investment objective will be achieved. The Trust also might not perform as well as you expect. This can happen for reasons such as these: • Securities prices can be volatile. The value of your investment may fall over time. Market values of the Trust's securities fluctuate in response to various factors affecting an issuer. Additionally, events such as war, terrorism, natural and environmental disasters and the spread of infectious illnesses or other public health emergencies are impossible to predict and may adversely affect the economy, various markets and issuers, which may negatively impact the performance of the Trust and the Trust's ability to achieve its investment objectives. • Share prices or distributions on the securities in the Trust may decline during the life of the Trust and there is no guarantee that the issuers of the securities will declare distributions in the future and, if declared, whether they will remain at current levels or increase over time. • The Trust invests in shares of ETFs which are subject to various risks, including management's ability to meet the fund's investment objective. Shares of ETFs may trade at a premium or discount from their net asset value in the secondary market. If the Trust has to sell an ETF share when the share is trading at a discount, the Trust will receive a price that is less than the ETF's net asset value. This risk is separate and distinct from the risk that the net asset value of the ETF shares may decrease. You will bear

not only your share of your Trust's expenses, but also the expenses of the underlying ETFs. By investing in ETFs, the Trust incurs greater expenses than you would incur if you invested directly in the ETFs. • The ETFs are subject to annual fees and expenses, including a management fee. Unitholders of the Trust will bear these fees in addition to the fees and expenses of the Trust. • The Trust is subject to an ETF's index correlation risk. • The value of the fixed-income securities in the ETFs will generally fall if interest rates, in general, rise. The Trust may be subject to greater risk of rising interest rates than would normally be the case due to the current economic environment and the effect of potential government fiscal policy initiatives and resulting market reaction to those initiatives. • An ETF or an issuer of securities held by an ETF may be unwilling or unable to make principal payments and/or to declare distributions in the future, may call a security before its stated maturity, or may reduce the level of distributions declared. Issuers may suspend distributions during the life of the Trust. This may result in a reduction in the value of your units. • The financial condition of an ETF or an issuer of securities held by an ETF may worsen, resulting in a reduction in the value of your units. This may occur at any point in time, including during the primary offering period. As the Trust is unmanaged, a downgraded security will remain in the portfolio. • Economic conditions may lead to limited liquidity and greater volatility. • Certain ETFs held by the Trust invest in: — Mortgage-backed securities. Mortgage-backed securities represent direct or indirect participations in, or are secured by and payable from, mortgage loans secured by real property and can include single- and multi-class pass-through securities and collateralized mortgage obligations. Unscheduled or early payments of principal and interest on the underlying mortgages may make the securities' effective maturity shorter than anticipated. Rising interest rates tend to extend the duration of mortgage-backed securities, making them more sensitive to changes in interest rates, and may reduce the market value of the securities. In addition, mortgage-backed securities are subject to prepayment risk, the risk that borrowers may pay off their mortgages sooner than expected, particularly when interest rates decline. This can reduce the ETFs', and therefore the Trust's, returns because the ETFs may have to reinvest that money at lower prevailing interest rates.; — Securities that are rated below investment-grade and are considered to be "junk" securities. Below investment-grade obligations are considered to be primarily speculative with respect to the issuer's ability to make principal and interest payments and may be more volatile than higher rated securities of similar maturity. Additionally, they are subject to greater market, credit and liquidity risks than investment-grade securities. Accordingly, the risk of non-payment or default is higher than with investment-grade securities. In addition, such securities may be more sensitive to interest rate changes and more likely to receive early returns of principal in falling rate environments.; — Securities that are rated as investment-grade by only one rating agency; such split-rated securities may have more speculative characteristics and are subject to a greater risk of default than securities rated as investment-grade

by more than one rating agency.; — Foreign securities, with the risk that foreign securities will be more volatile than U.S. securities due to such factors as adverse economic, currency, political, social or regulatory developments in a country.; — Securities issued by companies headquartered or incorporated in countries considered to be emerging markets, which may be exposed to greater volatility and market risk, including the possibility of investment and trading limitations, liquidity concerns, delays and disruptions in settlement transactions, political uncertainties and dependence on international trade and development assistance.; — Securities whose value may be dependent on currency exchange rates. The U.S. dollar value of these securities may vary with fluctuations in foreign exchange rates. Most foreign currencies have fluctuated widely in value against the U.S. dollar for various economic and political reasons such as the activity level of large international commercial banks, various central banks, speculators, hedge funds and other buyers and sellers of foreign currencies. • Inflation may lead to a decrease in the value of assets or income from investments. • The Trust may be susceptible to potential risks through breaches in cybersecurity. • The Trust is subject to risks arising from various operational factors and their service providers. Although the Trust seeks to reduce operational risks through controls and procedures, there is no way to completely protect against such risks. **Please see the Trust prospectus for more complete risk information.**

Unit Investment Trusts are fixed, not actively managed and should be considered as part of a long-term strategy. Investors should consider their ability to invest in successive portfolios, if available, at the applicable sales charge. UITs are subject to annual fund operating expenses in addition to the sales charge. Investors should consult an attorney or tax advisor regarding tax consequences associated with an investment from one series to the next, if available, and with the purchase or sale of units. Guggenheim Funds Distributors, LLC does not offer tax advice.

This material is not intended as a recommendation or as investment advice of any kind, including in connection with rollovers, transfers, and distributions.
