

# Floating Rate & Dividend Growth Portfolio, Series 20

## Investment Objective

The Floating Rate & Dividend Growth Portfolio, Series 20 (Trust) seeks to provide current income and, as a secondary objective, the potential for capital appreciation.

## Key Considerations

- **Maximize Current Income Potential:** The portfolio offers investors the potential to maximize their current income through rising dividends coupled with the attractive income potential of floating rate funds.
- **Hedge Interest Rate and Inflation Exposure:** Floating rate securities generally have low price sensitivity to interest rates and are positively correlated to inflation.
- **Dividend Growth:** Approximately 50% of the Trust portfolio constitutes dividend-paying stocks of U.S.-traded companies, which have an average annual dividend growth of over 10% over 10 years, as of 9.30.2019. However, dividend growth levels may not be maintained.<sup>3</sup>

### Past performance does not guarantee future results.

There is no guarantee that these trends and projections will come to fruition and they are subject to change.

<sup>3</sup> Bloomberg, 9.30.2019.

## Portfolio Allocation

Breakdown and weightings are as of 10.28.2019 and subject to change.

### CAPITALIZATION BREAKDOWN\*\*

### SECURITY TYPE

\*\*Comprises 50.00% of the portfolio, excludes closed-end funds and exchange traded funds.

## Venturing Beyond Traditional Income Sources

In the search for income, diversifying income investments may allow investors the potential to capture higher yields and total return. To offer investors a diversified income stream, Guggenheim created the Floating Rate & Dividend Growth Portfolio, which combines dividend-paying equities along with floating rate securities funds. One half of the Portfolio is comprised of dividend-growing equities—companies that have delivered 10+ years of year-over-year dividend growth. Dividend growth stocks tend to be of higher quality than those of the broader market and may provide a level of stability to an investor's overall portfolio during periods of market volatility.<sup>1</sup> The remaining half of the Portfolio is comprised of shares of floating rate closed-end and exchange traded funds, which invest a majority of their assets in individual floating rate senior loans. Floating rate securities have variable interest rates which adjust periodically based on the movement of the underlying index. This floating feature can also help to dampen overall volatility since it tends to decrease the security's price sensitivity to changes in interest rates unlike traditional bonds. Floating rate senior loans also tend to provide attractive yields relative to traditional bonds.<sup>2</sup>

The combination of floating rate securities and dividend-paying U.S. stocks may help to maximize current income and provide an income growth element over time.

<sup>1</sup> S&P Dow Jones Indices: A Case for Dividend Growth Strategies, January 2018.

<sup>2</sup> While floating rate senior loans can provide investors with high current income potential, the majority of loans are considered below investment-grade, and therefore retain a higher credit risk relative to lower yielding, investment-grade securities. The senior loan market is still considered relatively illiquid.

## PORTFOLIO HOLDINGS

Holdings, breakdown, and weightings are as of 10.28.2019 and subject to change.

## PORTFOLIO SUMMARY

<b>Inception Date</b>	10.29.2019
<b>Termination Date</b>	10.29.2021
<b>Initial Offer Price</b>	\$10.00
<b>Number of Issues</b>	47
<b>Historical Annual Dividend Distribution<sup>4</sup></b>	\$0.4081
<b>Distributions</b>	25th day of each month commencing on 11.25.2019, if any

<sup>4</sup> The Historical Annual Dividend Distribution (HADD) is as of 10.28.2019 and subject to change. There is no guarantee the issuers of the securities included in the Trust will declare dividends or distributions in the future. The HADD of the securities included in the Trust is for illustrative purposes only and is not indicative of the Trust's distribution rate. The HADD is the weighted average of the trailing twelve-month distributions paid by the securities included in the portfolio and is reduced to account for the effects of fees and expenses, which will be incurred when investing in the Trust. The HADD will vary due to certain factors that may include, but are not limited to, a change in the dividends paid by issuers, a change in Trust expenses or the sale or maturity of securities in the portfolio.

## TICKETING INFORMATION

<b>CUSIP (cash payment)</b>	40175D148
<b>CUSIP (reinvestment accounts)</b>	40175D155
<b>CUSIP (fee-cash)</b>	40175D163
<b>CUSIP (fee-reinvest)</b>	40175D171
<b>Ticker</b>	CFRDTX

## SALES CHARGES

Sales Charge (S/C) is based on a \$10 per unit offering price.

Standard Accounts	Amount Per Unit	Percentage of Public Offering Price
<b>Deferred S/C<sup>5</sup></b>	\$0.225	2.25%
<b>Creation and Development (C&amp;D) Fee</b>	\$0.050	0.50%
<b>Total S/C</b>	\$0.275	2.75%
Fee/Wrap Accounts <sup>6</sup>		
<b>Creation and Development (C&amp;D) Fee</b>	\$0.050	0.50%
<b>Total S/C</b>	\$0.050	0.50%

<sup>5</sup> The deferred sales charge (DSC) is a fixed amount and will be deducted in monthly installments on the last business day commencing May 2020 and ending July 2020 or upon early redemption. For unit prices other than \$10, percentages of C&D fees, and DSCs will vary but in no event will the maximum sales charge (S/C) exceed the total S/C. Early redemption of units will still cause payment of the DSC. However, an initial sales charge, which is equal to the difference between the maximum S/C and the sum of any remaining deferred S/C charges and C&D, will be charged if the price paid for units exceeds \$10 per unit.

<sup>6</sup> For unit prices other than \$10, percentage of the C&D fee will vary.

The Floating Rate & Dividend Growth Portfolio, Series 20 is a Unit Investment Trust.

**RISK CONSIDERATIONS:** As with all investments, you may lose some or all of your investment in the Trust. No assurance can be given that the Trust's investment objective will be achieved. The Trust also might not perform as well as you expect. This can happen for reasons such as these:

- Securities prices can be volatile.
- Share prices, dividend rates or distributions on the securities in the Trust may decline during the life of the Trust.
- The Trust invests in CEFs, which are subject to various risks, including management's ability to meet the CEF's investment objective and to manage the CEF's portfolio during periods of market turmoil and as investors' perceptions regarding CEFs or their underlying investments change. CEFs are not redeemable at the option of the shareholder and they may trade in the market at a discount to their net asset value. CEFs may also employ the use of leverage which increases risk and volatility. The underlying funds have management and operating expenses. You will bear not only your share of the Trust's expenses, but also the expenses of the underlying funds. By investing in other funds, the Trust incurs greater expenses than you would incur if you invested directly in the funds.

- The Trust invests in shares of ETFs, which are subject to various risks, including management's ability to meet the fund's investment objective. Shares of ETFs may trade at a discount from their net asset value in the secondary market. This risk is separate and distinct from the risk that the net asset value of the ETF shares may decrease. The amount of such discount from net asset value is subject to change from time to time in response to various factors. The underlying ETF has management and operating expenses. You will bear not only your share of your Trust's expenses, but also the expenses of the underlying ETFs. By investing in ETFs, the Trust incurs greater expenses than you would incur if you invested directly in the ETFs.
- The Trust is subject to an ETF's index correlation risk. To the extent that an underlying ETF is an index tracking ETF, index correlation risk is the risk that the performance of an ETF will vary from the actual performance of the fund's target index, due to fund expenses, transaction costs, market impact, corporate actions (such as mergers and spin-offs) and timing variances.
- The ETFs and CEFs are subject to annual fees and expenses, including a management fee. Unitholders of the Trust will bear these fees in addition to the fees and expenses of the Trust.
- The value of the fixed-income securities in certain CEFs and ETFs will generally fall if interest rates, in general, rise. Typically, fixed-income securities with longer periods before maturity are more sensitive to interest rate changes. The duration of a bond will also affect its price sensitivity to interest rate changes. The Trust may be subject to greater risk of rising interest rates than would normally be the case due to the current period of historically low rates.
- A CEF, ETF or an issuer of securities held by a CEF or ETF may be unwilling or unable to make principal payments and/or to declare distributions in the future, may call a security before its stated maturity, or may reduce the level of distributions declared. Issuers may suspend dividends during the life of the Trust. This may result in a reduction in the value of your units.

- The financial condition of a CEF, ETF or an issuer of securities held by a CEF or ETF may worsen, resulting in a reduction in the value of your units. This may occur at any point in time, including during the primary offering period.
- Certain CEFs and ETFs held by the Trust invest in securities that are structured as floating-rate instruments. The yield on these securities will generally decline in a falling interest rate environment, causing the CEFs and ETFs to experience a reduction in the income they receive from these securities. A sudden and significant increase in market interest rates may increase the risk of payment defaults and cause a decline in the value of these investments and the value of the CEFs and ETFs held by the Trust.
- Certain CEFs and ETFs held by the Trust invest in senior loans. Borrowers under senior loans may default on their obligations to pay principal or interest when due, which would result in a reduction of income to the applicable CEF or ETF, a reduction in the value of the senior loan experiencing non-payment and a decrease in the net asset value of the CEF or ETF. Although senior loans in which the CEFs and ETFs invest may

be secured by specific collateral, there can be no assurance that liquidation of collateral would satisfy the borrower's obligation in the event of non-payment of scheduled principal or interest or that such collateral could be readily liquidated. The amount of public information available on senior loans generally is less extensive than that available for other types of assets.

- The Trust invests in U.S.-listed foreign securities, and certain CEFs and ETFs held by the Trust may invest in foreign securities, which presents additional risk. Securities of foreign issuers present risks beyond those of domestic securities. Foreign risk is the risk that foreign securities will be more volatile than U.S. securities due to such factors as adverse economic, currency, political, social or regulatory developments in a country, including government seizure of assets, excessive taxation, limitations on the use or transfer of assets, the lack of liquidity or regulatory controls with respect to certain industries or differing legal and/or accounting standards.
- Certain CEFs and ETFs held by the Trust may invest in securities issued by companies headquartered or incorporated in countries considered to be emerging markets, which may be exposed to greater volatility and market risk including the possibility of investment and trading limitations, liquidity concerns, delays and disruptions in settlement transactions, political uncertainties and dependence on international trade and development assistance.
- The Trust invests in securities issued by mid-cap companies and certain CEFs or ETFs held by the Trust may invest in securities issued by small- and/or mid-cap companies which may have limited product lines, markets or financial resources and may be more vulnerable to adverse general market or economic developments. These securities customarily involve more investment risk than securities of large-cap companies.
- Economic conditions may lead to limited liquidity and greater volatility.
- Certain CEFs and ETFs held by the Trust invest in securities that are rated below investment-grade and are considered to be "junk" securities, speculative and are subject to greater market and credit risks, and accordingly, the risk of non-payment or default is higher than with investment-grade securities; such securities may be more sensitive to interest rate changes and more likely to receive early returns of principal.
- Certain CEFs and ETFs held by the Trust may invest in securities that are rated as investment-grade by only one rating agency; such split-rated securities may have more speculative characteristics and are subject to a greater risk of default than securities rated as investment-grade by more than one rating agency.
- Inflation may lead to a decrease in the value of assets or income from investments.

**Please see the Trust prospectus for more complete risk information.**

Unit Investment Trusts are fixed, not actively managed and should be considered as part of a long-term strategy. Investors should consider their ability to invest in successive portfolios, if available, at the applicable sales charge. UITs are subject to annual fund operating expenses in addition to the sales charge. Investors should consult an attorney or tax advisor regarding tax consequences associated with an investment from one series to the next, if available, and with the purchase or sale of units. Guggenheim Funds Distributors, LLC does not offer tax advice.
