

Diversified Income Wave Portfolio, Series 79

Investment Objective

The Diversified Income Wave Portfolio, Series 79 (Trust) seeks to provide current income and the potential for capital appreciation by investing in common shares of closed-end investment companies (closed-end funds).

Key Considerations

- **Attractive Income Potential:** Investors seeking income may find opportunity in closed-end funds which have historically paid consistent and above-average dividends. The Trust seeks to provide an attractive level of income. The historical annual dividend distribution is \$1.0019,¹ as of 12.8.2020.
- **Opportunity for Discounts:** Among other criteria, the closed-end funds within the portfolio are selected based on a discount to the net asset value, creating an opportunity for capital appreciation potential.
- **Diversification*:** The portfolio offers exposure to a variety of closed-end fund asset classes, which can potentially help lower some risk during periods of increased market volatility.

Past performance is no guarantee of future results. There is no guarantee that the trends and projections noted above will continue or come to fruition and they are subject to change.

Closed-End Fund Asset Class Allocation

The Trust invests in a diversified portfolio of closed-end funds containing securities of different asset classes.*

ASSET CLASS BREAKDOWN

	Weight
High Yield	15.00%
Covered Call	13.00%
Multi-Sector	10.00%
Global Allocation	9.00%
Senior Loans	7.00%
Global Equity	6.00%

U.S. Equity	3.00%
Total	100.00%

Portfolio is fixed and unmanaged. Weightings are as of 12.8.2020 and subject to change.

*Diversification does not ensure a profit or eliminate the risk of loss.

Attractive Income from a Mix of Closed-End Fund Asset Classes

The addition of Guggenheim's Diversified Income Wave Portfolio to an overall balanced portfolio may offer investors the potential for both high levels of distribution income and increased diversification. The Trust invests in shares of multiple closed-end funds with high-current income investment strategies and is tactically allocated across a broad range of asset classes that Guggenheim believes may help achieve strong risk-adjusted performance.

The chart below shows the annualized distribution yields of the top five asset classes held within the portfolio, which have, on average over the last five years, generated higher income compared to the average yield of all U.S.-listed closed-end funds. Exposure to a diverse basket of closed-end funds may help to provide investors with a steady income stream especially during periods of market volatility.

See Risk Considerations on next page for risk associated with investing in closed-end funds.

TOP FIVE CEF ASSET CLASS ANNUALIZED DISTRIBUTION RATES VS INDUSTRY AVERAGE

2016	2017	2018	2019	Year to Date 2020

¹The Historical Annual Dividend Distribution (HADD) is as of the day prior to trust deposit and subject to change. There is no guarantee the issuers of the securities included in the Trust will declare dividends or distributions in the future. **Due to the negative economic impact across many industries caused by the recent COVID-19 outbreak, certain issuers of the securities included in the Trust may elect to reduce the amount of, or cancel entirely, dividends and/or distributions paid in the future. As a result, the HADD figure will likely be higher, and in some cases significantly higher, than the actual distribution rate achieved by the Trust.** The HADD of the securities included in the Trust is for illustrative purposes only and is not indicative of the Trust's distribution rate. The HADD is the weighted average of the trailing twelve-month distributions paid by the securities included in the portfolio and is reduced to account for the effects of fees and expenses, which will be incurred when investing in the Trust. The HADD will vary due to certain factors that may include, but are not limited to, a change in the dividends paid by issuers, a change in Trust expenses or the sale or maturity of securities in the portfolio. ²The deferred sales charge (DSC) is a fixed amount and will be deducted in monthly installments on the last business day commencing April 2021 and ending June 2021 or upon early redemption. For unit prices other than \$10, percentages of C&D fees, and DSCs will vary but in no event will the maximum sales charge (S/C) exceed the total S/C. Early redemption of units will still cause payment of the DSC. However, an initial sales charge, which is equal to the difference between the maximum S/C and the sum of any remaining deferred S/C charges and C&D, will be charged if the price paid for units exceeds \$10 per unit. ³For unit prices other than \$10, percentage of the C&D fee will vary.

The Diversified Income Wave Portfolio, Series 79 is a Unit Investment Trust.

RISK CONSIDERATIONS: As with all investments, you may lose some or all of your investment in the Trust. No assurance can be given that the Trust's investment objective will be achieved. The Trust also might not perform as well as you expect. This can happen for reasons such as these:

- Securities prices can be volatile. The value of your investment may fall over time. Market value fluctuates in response to various factors. Changes in legal, political, regulatory, tax and economic conditions may cause fluctuations in markets and securities prices, which could negatively impact the value of the Trust. Events such as war, terrorism, natural and environmental disasters and the spread of infectious illnesses or other public health emergencies may adversely affect the economy, various markets and issuers. Recently, the outbreak of a novel and highly contagious form of coronavirus ("COVID-19") has adversely impacted global commercial activity and contributed to significant volatility in certain markets. Many governments and businesses have instituted quarantines and closures, which has resulted in significant disruption in manufacturing, supply chains, consumer demand and economic activity. The potential impacts are increasingly uncertain, difficult to assess and impossible to predict, and may result in significant losses. Any adverse event could materially and negatively impact the value and performance of trust and the Trust's ability to achieve its investment objectives.
- Share prices or dividend rates on the securities in the Trust may decline during the life of the Trust and there is no guarantee that the issuers of the securities will declare dividends in the future and, if declared, whether they will remain at current levels or increase over time.
- The Trust includes Closed-End Funds (CEFs), which are subject to various risks, including management's ability to meet the CEF's investment objective and to manage the CEF's portfolio during periods of market turmoil and as investors' perceptions regarding CEFs or their underlying investments change. CEFs are not redeemable at the option of the shareholder and they may trade in the market at a discount to their net asset value. CEFs may also employ the use of leverage which increases risk and volatility.
- The CEFs are subject to annual fees and expenses, including a management fee. Unitholders of the Trust will bear these fees in addition to the fees and expenses of the Trust.
- The value of the fixed-income securities in the CEFs will generally fall if interest rates, in general, rise. Typically, fixed-income securities with longer periods before

maturity are more sensitive to interest rate changes. The Trust may be subject to greater risk of rising interest rates than would normally be the case due to the current period of historically low rates. • A CEF or an issuer of securities held by a CEF may be unwilling or unable to make principal payments and/or to declare distributions in the future, may call a security before its stated maturity, or may reduce the level of distributions declared. Issuers may suspend dividends during the life of the Trust. This may result in a reduction in the value of your units. • Economic conditions may lead to limited liquidity and greater volatility. • The financial condition of a CEF or an issuer of securities held by a CEF may worsen, resulting in a reduction in the value of your units. This may occur at any point in time, including during the primary offering period. • Certain CEFs held by the Trust invest in securities that are rated below investment-grade and are considered to be "junk" securities, speculative and are subject to greater market and credit risks, and accordingly, the risk of non-payment or default is higher than with investment-grade securities; such securities may be more sensitive to interest rate changes and more likely to receive early returns of principal in falling rate environments. • Certain CEFs held by the Trust may invest in securities that are rated as investment-grade by only one rating agency; such split-rated securities may have more speculative characteristics and are subject to a greater risk of default than securities rated as investment-grade by more than one rating agency. • Certain CEFs held by the Trust invest in foreign securities, which presents additional risk. Foreign risk is the risk that foreign securities will be more volatile than U.S. securities due to such factors as adverse economic, currency, political, social or regulatory developments in a country. • Certain CEFs held by the Trust invest in securities issued by companies headquartered or incorporated in countries considered to be emerging markets, which may be exposed to greater volatility and market risk, including the possibility of investment and trading limitations, liquidity concerns, delays and disruptions in settlement transactions, political uncertainties and dependence on international trade and development assistance. • Certain CEFs held by the Trust invest in common stocks, which represent a proportional share of ownership in a company. Common stock prices fluctuate for several reasons including changes in investors' perceptions of the financial condition of an issuer, changes in the general condition of the relevant stock market, such as the market volatility recently exhibited, or when political or economic events affect the issuers and may also be sensitive to rising interest rates, as

the cost of capital rises and borrowing costs increase. • Certain CEFs held by the Trust may invest in securities issued by small- and mid-cap companies, which may have limited product lines, markets or financial resources and may be more vulnerable to adverse general market or economic developments. These securities customarily involve more investment risk than securities of large-capitalization companies. • The Trust may be susceptible to potential risks through breaches in cybersecurity. • The Trust is subject to risks arising from various operational factors and their service providers. Although the Trust seeks to reduce operational risks through controls and procedures, there is no way to completely protect against such risks. • Inflation may lead to a decrease in the value of assets or income from investments. **Please see the Trust prospectus for more complete risk information.**

Unit Investment Trusts are fixed, not actively managed and should be considered as part of a long-term strategy. Investors should consider their ability to invest in successive portfolios, if available, at the applicable sales charge. UITs are subject to annual fund operating expenses in addition to the sales charge. Investors should consult an attorney or tax advisor regarding tax consequences associated with an investment from one series to the next, if available, and with the purchase or sale of units. Guggenheim Funds Distributors, LLC does not offer tax advice.
